-!- FUNCTION: Attach integral membrane proteins to cytoskeletal elements. Also bind to cytoskeletal proteins.
-!- ALTERNATIVE PRODUCTS: 3 ISOFORMS; 1 (SHOWN HERE), 2 AND 3; ARE PRODUCED BY ALTERNATIVE SPLICING.
-!- TISSUE SPECIFICITY: PLASMA MEMBRANE OF NEURONS AS WELL AS GLIAL CELLS THROUGHOUT THE BRAIN.

                                                                                                                                                                                                                                           FUNCTION: THIS PROTEIN SPECIFICALLY BINDS TO THE DNA SEQUENCE 5'-GGGACTTTCC-3' WHICH IS FOUND IN THE ENHANCER ELEMENTS OF NUMEROUS VIRAL PROMOTERS SUCH AS THOSE OF SV40, CMV, OR HIV1. IN ADDITION, RELATED SEQUENCES ARE FOUND IN THE ENHANCER ELEMENTS OF A NUMBER OF CELLULAR PROMOTERS, INCLUDING THOSE OF THE CLASS I MC, INTERLEUKIN-2 RECEPTOR, AND INTERFERON-BETA GENES. IT MAY ACT IN T-CELL ACTIVATION.
  "High-resolution three-dimensional structure of a single zinc finger from a human enhancer binding protein in solution.";

This SWISS-PROT entry is copyright. It is produced through a collaboration between the Swiss Institute of Bioinformatics and the EMBL outstation the European Bioinformatics Institute. There are no restrictions on its use by non-profit institutions as long as its content is in no way modified and this statement is not removed. Usage by and for commercial entities requires a license agreement (See http://www.isb-sib.ch/announce/or send an email to license@isb-sib.ch).
 Morelli C., Mungall A.J., Negrini M., Barbanti-Brodano G., Croce C.M.; "Alternative splicing, genomic structure, and fine chromosome localization of REV3L ("REV3L" 83:18-20(1998).

-I- CATALYTIC ACTIVITY: N deoxynucleoside triphosphate = N diphosphate
 + {DNA}(N).

-1- SUBCELLULAR LOCATION: Nuclear (Potential).

-1- TISSUE SPECIFICITY: UBLOUITOUSLY EXPRESSED.

-1- DOMAIN: ITS C-TERMINAL PART COULD SERVE AS THE CATALYTIC DOMAIN

DURING NUCLEOTIDE POLYMERIZATION, WHILE ITS N-TERMINAL PART COULD

PROVIDE SITES FOR PROTEIN "PROTEIN INTERACTIONS WITH OTHER FACTORS

DURING TRANSLESION DAM SYNTHESIS.

-1- SIMILARITY: BELONGS TO DNA POLYMERASE TYPE-B FAMILY.

 This SWISS-PROT entry is copyright. It is produced through a collaboration between the Swiss Institute of Bioinformatics and the EMBL outstation-the European Bioinformatics Institute. There are no restrictions on its use by non-profit institutions as long as its content is in no way modified and this statement is not removed. Usage by and for commercial entities requires a license agreement (See http://www.isb-sib.ch/announce/
 MONOCYTIC CELL LINES OR PERIPHERICAL BLOOD CELLS.
INDUCTION: ACTIVATED BY LYSOPHOSPHATIDYLCHOLINE (LYSOPC).
DOMAIN: POLYBASIC REGIONS LOCATED BETWEEN RESIDUES 265 AND 556 ARE
INVOLVED IN BINDING PKC.
DISEASE: ANTIBODIES TO THE C-TERMINAL OF GRAVIN CAN BE PRODUCED BY
PATIENTS WITH MYASTHENIA GRAVIS (MG).
 AKAC_HUMAN STANDARD; PRT; 1781 AA.

OUG952; 099970; 000498; 000310;
01-FEB-1994 (Rel. 28, Created)
16-ocr-2001 (Rel. 40, Last sequence update)
01-MAR-2002 (Rel. 41, Last annotation update)
01-MAR-2002 (Rel. 41, Last annotation update)
250) (Myssthenia gravis autoantigen gravin).
AKAP12 OR AKAP250.
 ALTERNATIVE PRODUCTS: 2 ISOFORMS; 1 (SHOWN HERE) AND 2; MAY BE PRODUCED BY ALTERNATIVE SPLICING.
TISSUE SPECIFICITY: EXPRESSED IN ENDOTHELIAL CELLS, CULTURED FIBROBLASTS AND OSTEOSARCOMA, BUT NOT IN PLATELETS, LEUROCYTES.
 Nauert J.B., Klauck T.M., Langeberg L.K., Scott J.D.; "Gravin, an autcoantigen recognized by serum from myasthenia gravis patients, is a kinase scaffold protein."; cur. Blol. 7:52-62(1997).
 TISSUE-Umbilical vein endothelial cells;

STATURALIAR LOCATION: Nuclear (Potential).

-!- SUBCELLULAR LOCATION: Nuclear (Potential).

-!- TISSUE SPECIFICITY: IN THE EMBRYO, EXPRESSED IN OTIC VESICLES AT DAY 9.5. AT DAY 10.5, THIS EXPRESSION DECREASES AND HIGH LEVELS DAY 9.5. AT DAY IN THE NEUROECTODERN. AT DAYS 11-12.5, HIGH LEVELS IN DIFFERENTIATING KERATINGOYTES AND WHISKER PAD PRIMORDIA. AT DAYS 14-17, EXPRESSION ALSO OBSERVED IN KIDNEY EPITHELIAL CELLS. IN THE ADUIT, HIGHEST LEVELS FOUND IN SPLEEN, THYMUS, LYMPH NODES, EPITHELIAL ORGANS, AND ALVEOLAR AND DUCTAL EPITHELIAL CELLS OF THE MAMMARY GLAND. VERY LOW LEVELS IN BRAIN, KIDNEY, AND SKIN. NO EXPRESSION IN HEART, LIVER OR LUNG.

"tpr homologues activate met and raf.";
Oncogene 2:617-619(1988).
-i- FUNCTION: COMPONENT OF THE CYTOPLASMIC FIBRILS OF THE NUCLEAR PORE
 COMPLEX IMPLICATED IN NUCLEAR PROTEIN IMPORT: ITS ARINO TERMINOS IS INVOLVED IN ACTIVATION OF ONCOGENIC KINASES.
SUBCELLULAR LOCATION: CYTOLASMIC SURRACE OF THE NUCLEAR PORE COMPLEX. THE ASSEMBLY OF THE NPC IS A STEPWISE PROCESS IN WHICH TRP-CONTAINING PERIPHERAL STRUCTURES ASSEMBLE AFTER OTHER COMPONENTS, INCLUDING P62.

IISSUE SPECIFICITY: HIGHEST IN TESTIS, LUNG, TYMUS, SPLEEN AND BRAIN, LOWER LEVELS IN THANKY, LIVER, AND KIDNEY.

DISEASE: INVOLVED IN TUMORIGENIC REARRANGEMENTS WITH THE MET, TRK

 Funahashi S., Sato T., Shida H.; "Cloning and characterization of the gene encoding the major protein of the A-type inclusion body of cowpox virus."; J. Gen. Virol. 69:35-47(1988).
 FUNCTION: MATURE VIRISES ARE OCCLUDED INTO THE ATI, AND IT HAS BEEN ASSUMED THAT SIGH BODIES PROTECT THE VIRUS DURING DISSEMINATION FROM ANIMAL TO ANIMAL.
MISCELLANBOUS: A CHARACTERISTIC FEATURE OF ATI IS THE FORWATION LARGE MASSES WITH NO SURROUNDING MEMBRANES IN THE CYTOPLASM OF
 Cowpox virus (CPV).
Viruses; dsDNA viruses, no RNA stage; Poxviridae; Chordopoxvirinae;

Cell cycle protein; Ki-67; therapy; cell proliferation; allergy; tumor treatment; autoimmune disease; scar formation; inflammation; rheumatic disease; transplantation.

Human cell cycle protein Ki-67.

10-MAR-2000 (first entry)

AAY50976;

characterized in that, it hybridizes to mRNA that encodes protein Ki-67 at a physiologically acceptable salt concentration. The oligoribo- or oligodeoxyribonucleotide which is complementary to Ki-67, a protein active at all stages of the cell cycle except G\_0, is useful for therapy of illnesses with increased cell proliferation and particularly for treatment of tumors, autoimmune diseases, scar formation, inflammation, allergy, rheumatic diseases and defence against transplantation. This sequence represents the human cell cycle protein Ki-67 which is described in the method of the invention. \*8888888888888

 The invention relates to isolated polynuclectide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, colymerase chain readrino (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynuclectides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques consistent or constant activity of (II) or to treat disease states involving consistent or production of the constant activity of (II) or to treat disease states involving an polypeptide in tissue, as molecular weight markers and as consistent and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating consistent involving aberrant protein expression or biological activity. The polypeptide and polynuclectide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genefic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and configuration and incoming sequences of the invention.

CC diagnostic amino acid sequences of the invention.

CC Note: The sequence data for this parent did not appear in the printed specification, but was obtained in electronic format directly from WIPO cc at ftp.wipo.int/pub/published_pct_sequences.
 New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess biodiversity
 Human; chromosome mapping; gene mapping; gene therapy; forensic; food supplement; medical imaging; diagnostic; genetic disorder.

The present invention provides the protein and coding sequences of the human 07GG27 oncogene. This gene is found at the HPC1 region of chromosome 1. The sequences can be used in the diagnosis and identification of treatments for prostate cancer. The present sequence the 07GG27 protein.

```
on relates to an isolated nucleic acid detection reagent letecting 1000 or more genes from Drosophila. The invention is velopmental biology and in elucidating cell signalling and iteractions in higher eukaryotes for the development of thrapeutics and pharmaceutical drugs. The invention is inomic DNA sequences (ABL16176-ABL30511), expressed DNA is incomic DNA sequences (ABL16176 and the encoded proteins
 data for this patent did not form part of the printed n, but was obtained in electronic format directly from WIPO int/pub/published_pct_sequences.
 nucleic acid detection reagent for detecting 1000 or more rosophila and for elucidating cell signalling and cell-cell

 The invention relates to polynucleotides (AAK51456-AAK53435) and the encoded polypeptides (AAM78323-AAM80302) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polymerides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopoiesis regulating activity, tissue growth factor activity, immunomodulatory activity and activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and
 Ma Y;
 Note: Records for SEQ ID NO 2110 (AAK52581), 2111 (AAK52582) and 3666 (AAM80020) are omitted as the relevant pages from the sequence listing were missing at the time of publication.

immunosuppressant and cytostatic activity. The polynuclectides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the prinched in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervous system, such as peripheral nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic attactal scalerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activin/inhibin activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and C.N.S disorders.

Note: The sequence data for this patent did not form part of the printed

77;
 The invention relates to an isolated nucleic acid detection reagent capable to detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticidaes, therapeutics and pharmaceutical fungs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins
 The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
 New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell interactions - \,

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genee. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving activity of (II) or to treat disease states involving antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical inaging of sites expressing (II). (I) and (II) are useful in medical disorders involving aberrant protein expression or bilogical activity. The polypeptide and polynuclectide sequences have applications in the printed and produce other types of data and products dependent on DNA and diagnostic amino acid sequences. ABG00010-ABG30377 represent novel human classed acquence data for this patent did not appear in the printed set the very partner of the printed in the printed are the very forms and produce of the invention of energy from WIPO are the very first of the very first patent did not appear in the printed are the very contact of produce of the invention of format directly from WIPO are the very first of the very firs
 New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess

 The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving
 (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity amino acid sequences. ABG00010-ABG30377 represent novel human diagnostic amino acid sequences of the invention.
 Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO
New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess

 ANU14602-AAU14794 represent novel bone marrow polypeptides of the invention. The proteins and corresponding coding sequences may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate bone marrow polypeptide expression. For example, to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of the polypeptides by expressing inactive proteins or to supplement the patient's own production of the polypeptides, by inserting the nucleic acids may be used to produce the polypeptides, by inserting the nucleic acids into a host cell and culturing the cell to express the protein. The nucleic acid and its complementary sequences may also be used as probes in diagnostic assays to detect and quantitate the presence of similar nucleic acid sequences in samples, and therefore which patients may be in need of restorative therapy. The proteins may also be used as antigens in the production of antibodies and antigonists may also be used. The anti-bone marrow proteins and in assays to identify modulators of their expression and activity.
 78;
 to down regulate expression and activity. The antibodies may also be used as diagnostic agents for detecting the presence of the protein in samples (e.g. by enzyme linked immunosorbant assay (ELISA)). The proteins may be used to regulate haematopoiesis activity, and consequently in the treatment of myeblad or lymph cell disorders; in tissue regeneration, such as wound healing; as a nutritional supplement; and in treatment of immune disorders such as severe combined immunodeficiency (SCID).

 The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention suseful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins
 New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell
 The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO

 AND AAU14002-AAU14794 represent novel bone marrow polypeptides of the invention. The proteins and corresponding coding sequences may be used in the prevention, diagnosis and treatment of diseases associated with cinappropriate bone marrow polypeptide expression. For example, to treat disorders associated with decreased expression by rectifying mutations of disorders associated with decreased expression by rectifying mutations of disorders associated with decreased expression by rectifying mutations of disorders by expressing inactive proteins or to supplement the polypeptides by expressing inactive proteins or to supplement the cation may be used to produce the polypeptide. Additionally, the nucleic acid and its complementary sequences may also be used as DNA complementary sequences may also be used as DNA complementary sequences may also be used as DNA complementary sequences may also be used as Indiagnostic assays to detect and quantitate the presence of similar nucleic acid sequences in samples, and therefore which patients may be in need of restorative therapy. The proteins may also be used and in assays to identify modulators of their expression and activity.

The anti-bone marrow protein antibodies and antagonists may also be used as diagnostic agents for detecting the presence of the protein in samples companies to regulate haematopoiesis activity, and consequently in the treatment of myeloid or lymph cell disorders; in tissue regeneration, cut and meaning; as a untritional supplement; and in treatment of immune disorders such as severe combined immunodeficiency (SCID).
 Nucleic acids encoding bone marrow polypeptides, useful in diagnostic
 Bone marrow, diagnostic, therapeutic; gene therapy; antigenic; haematopolesis; myelold; lymph cell disorder; tissue regeneration; wound healing; nutritional supplement; immune disorder; severe combined immunodeficiency; SCID.

hypothetical protein F28A23.180 - Arabidopsis thaliana C; Species: Arabidopsis thaliana (mouse-ear cress)
C; Species: Arabidopsis thaliana (mouse-ear cress)
C; Accession: T05430
B; Bevan, M.; Weichselgartner, M.; Fartmann, B.; Granderath, K.; Dauner, D.; Herzl, A. Submitted to the Protein Sequence Database, October 1998
A; Reference number: 215415
A; Accession: T05430
A; Molecule type: DNA
A; Residues: 1-917 <BEV>
